

F-003 Herd and Local Orders

SOURCE READY / AUTHORIZED | CityOfAnimals | Godot 4.6 | Mobile portrait 720 x 1280

Player promise

A field can feed a living farm: crop becomes animal material, material becomes a crafted good, and several local orders give the player a meaningful delivery choice.

Commercial-safety boundary

This is an original farm-production slice. It uses only genre-common ideas - animal care, processing buildings, local orders, and later logistics unlocks. It does not copy commercial-game names, art, maps, recipes, UI layouts, assets, code, or order designs. Current visuals remain project-owned vector primitives and approved emoji/SVG development placeholders.

Smallest closed loop

Plant -> Grainleaf -> Willow Pen -> Soft Fleece -> Threadmill -> Yarn Roll -> choose a local order -> coins and renown

Scope

Object	Input	Time	Output / reward
Willow Pen	1 Grainleaf	7 s	1 Soft Fleece
Threadmill	2 Soft Fleece	7 s	1 Yarn Roll
Loaf ticket	1 Meadow Loaf	Immediate	24 coins + 1 renown
Fleece ticket	1 Soft Fleece	Immediate	18 coins + 1 renown
Yarn ticket	1 Yarn Roll	Immediate	42 coins + 2 renown

Visual hierarchy and interaction

P0: fields, bakery, Willow Pen, Threadmill, and three order tickets are large direct world-object targets. P1: four inventory counters, coins, renown, and ticket rewards use compact item icons. P2: one concise status ribbon and the existing language settings tray. Every valid or invalid tap changes visible state or returns localized feedback.

720 x 1280 presentation default

The engine, profile, project workflow, and selected common workflow default to a 720 x 1280 portrait mobile viewport. Layouts scale responsively; safe areas, touch targets, readable labels, and core state changes are acceptance checks at that resolution.

Deferred logistics

Planned feature	Unlock concept	Separate future contract
F-004 Rail Freight Depot	Renown 6	Two-item manifest, 15-second loading state, visible rail-cart departure.
F-005 Cloud Cargo Port	Renown 12	Three-good cargo request, 20-second loading state, visible sky-cargo departure.

Explicit non-goals

No rail or air runtime code in F-003; no real-world timers, monetization, persistence beyond language preference, networking, new scene, external art, or commercial-game replication.

Acceptance

F-003 closes only after direct-object behavior is tested for the new chain and all three tickets, F-001/F-002 regressions pass, a normal 720 x 1280 startup is clean, sealed data is unchanged, and the visual capture environment is unblocked or a reviewed capture is recorded.
